

LO: I can add and subtract fractions with the same denominator

Use the models to add the fractions:

Choose your preferred model to add:

$$\frac{2}{5} + \frac{1}{5}$$

$$\frac{3}{7} + \frac{6}{7}$$

$$\frac{7}{9} + \frac{4}{9}$$

①  $\frac{2}{7} + \frac{2}{7} = \frac{4}{7}$  ✓

Two sevenths add two sevenths is four sevenths.

②  $\frac{3}{5} + \frac{4}{5} = \frac{7}{5}$  ✓ Three fifths add four fifths is seven fifths.

③  $\frac{2}{5} + \frac{1}{5} = \frac{3}{5}$  ✓

I chose this one because it doesn't go over a whole number. I prefer  $\frac{2}{5} + \frac{1}{5}$  because it doesn't go over a whole number. ✓ whole
